

LONG-LIFE VE SERIES SPHERICAL ROLLER BEARINGS

FOR VIBRATING MACHINERY AND EQUIPMENT

STAY IN MOTION. STAY IN CONTROL.

RELENTLESS GRIT: BEARINGS FOR MINING AND CONSTRUCTION

Punishing Loads. Misalignment. Mechanical shock. Grit and contamination and marginal lubrication. A day in a life for bearings used in mining, aggregate and construction industries.

For the machinery and equipment used to extract, transport and process — interdependent in their purpose — access can be remote or restricted. The unexpected failure of a single component can bring an entire site to a standstill — at a significant cost.

For NSK, product development and design is focused squarely on withstanding the manifold operating and environmental stresses of these applications with:

- > increasing capacities for high loads and high speeds
- > advanced materials for durability, wear resistance and longer life
- Iubrication and seal technology for smooth and clean running

Our product solutions are designed to optimize the performance of machinery and equipment, to assure predictable reliability and to deliver total cost-efficiency.

UNSHAKABLE PERFORMANCE IN VIBRATING SCREENS

Punishing loads. Radial acceleration. Relentless vibration and mechanical shock. NSK's VE series spherical roller bearings are engineered specifically to contend with the severity of vibrating machinery and equipment applications with stabilized load distribution and robust performance, delivering long-life operating benefits that include:

As much as twice the service life as that of conventional bearings in applications subject to frequent vibration

Superior resistance to heavy loads and shock loads

Smooth running with superior roller guidance and controlled roller skew

Optimized lubricant distribution to rolling contact surfaces facilitated by precision-machined cage pocket geometry

High-speed performance with low operating temperature rise

Reduced bearing damage from slippage, surface fatigue and flaking

Higher operational reliability with reduced incidents and maintenance costs

A NEW STANDARD IN HIGH-CAPACITY PERFORMANCE

With our new extra-capacity ECA spherical roller bearings, NSK delivers unrivalled reliability to vibrating machinery and equipment applications, achieving an unprecedented level of high performance standard with:

Newly optimized internal design with an advanced roller-guided cage that eliminates the need for a center guide ring

Higher load ratings derived from a larger complement of larger-sized rollers

Higher limiting speeds are achievable, even greater than comparable steel cage designs

DESIGN FEATURES

- Manufactured from ultra-clean steel for optimal fatigue strength and longer life
- > Optimized, high-capacity (CA) internal designs
- Guide ring-free ECA type with next-generation rollerguided machined brass cage packs in more rollers of larger size for higher loads and longer fatigue life
- Advanced raceway surface finish for improved lubrication characteristics and wear resistance
- > With outer ring lubricating groove and holes
- High temperature dimensional stability in working temperatures up to 200°C

- Special dimensional tolerances set at 1/2 relative to the normal — to minimize vibration during operation
- Special internal clearance set at upper 2/3 relative to the standard — for optimal operating clearance and reduced heat generation
- Available in dimension series 223 and 233 for shaft diameters ranging from 40 to 220 mm
- Available with Hi-TF material option for severe operating environments

HIGH-PERFORMANCE FACTOR: LONG-LIFE TOUGH STEEL

NSK has adopted our Hi-TF steel, engineered specifically to mitigate the catastrophic impact of bearing lubricant contamination. Through advanced material composition and carbonitriding heat treatment, this resilient steel exudes greater hardness and higher toughness, extending bearing life in severe operating conditions with:

Superior wear resistance: less than 1/3 the rate of wear of standard bearing steel

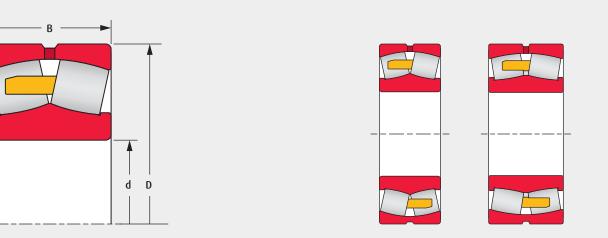

Greater seizure resistance: as much as a 20% improvement

Under contaminated lubrication conditions that instigate progressive bearing damage and failure, **NSK Hi-TF bearings deliver as much as 7 times longer life** when compared with general carburized alternatives.

Life test: Result under foreign contamination

RECOMMENDED SHAFT AND HOUSING FITS

Ð

Ensuring appropriate interference between mating surfaces is imperative to optimize the operating life of spherical roller bearings in vibrating equipment.

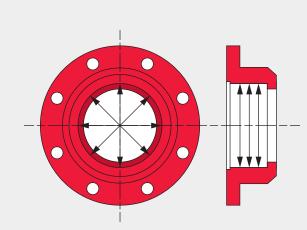

It is recommended to inspect fits prior to installation: measure and record shaft and housing dimensions and review the values with the recommendations in the tables below.

Checking cylindrical shafts
